Finance this heater for approximately \$90.00 / month

Introducing the Alkota space heater! A high quality space heater that circulates as much air as heaters 3 times its size. This heater, unlike a typical space heater, is designed to be dependable and keep you warm for decades.

Alkota space heaters use the **same components as an oil burning furnace**. In addition, the Alkota space heaters **can burn diesel, kerosene, and home heating oil**. Also, these space heaters have a **quality fuel pump**, unlike the average space heater. Average space heaters have no fuel pump and work on a vacuum system.

Alkota Filter

As you can see just by the size difference, an Alkota's fuel filter is designed to take much more abuse than a typical fuel filter. Typical filters do little to prevent break downs from fuel contamination.

Typical Filter

Upgrade to fuel water separator style filter for additional \$90.00

Pressure Washers * Space Heaters * Cleaning Chemicals * Small Engine Parts
